## Profiles in Discovery: Trail Blazing Bioscientists

Since its inception in 1960, UCSD has been home to several of the world's leading biologists. These outstanding scientists have made incredible discoveries in cell biology, biochemistry, genetics, microbiology, and bioinformatics and left indelible marks on our UCSD science community. To honor these pioneers and ensure that their legacy and stories are preserved for future generations, we established the *Profiles in Discovery* series. Through this series, the legends of UCSD Biology give an in-depth career perspective talk in which they provide the context in which they made their seminal discoveries. Their talks are interwoven with a revealing personal interview and edited for broadcast television (UCSD TV) and online viewing. We aim to develop a *Profiles in Discovery* website, accompanying promotional materials and ultimately, to ensure that the *Profiles in Discovery* will continue for years to come.

Past speakers have included **S. Jonathan Singer** (top) **Donald Helinski** (middle) and **Dan Lindsley** (bottom). Our next scheduled speaker is **Peter Geiduschek**.
